

Permanent U shape alnico magnet type AA 03

REF 83.03
{ERREUR : balise [PRESTATION_CRITERE_ASOUST] inconnue}

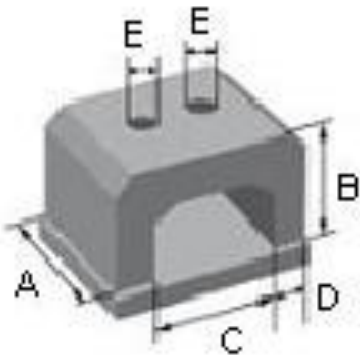

Mounting, Lock, Clamping

Aluminum Nickel Cobalt magnets are castings that offer a good mechanical resistance as well as an elevated induction in closed circuit.

The strength is highest when the magnet is in contact with a Mild Steel, that is clean and thick enough. The Strength is reduced when in contact with Alloy steels (cast Iron -30%), due to air-gap or a high temperature (-0.02% per degree °C). **ALNICO magnets are Machinable, they can be cut on request. The mounting is done with glue.** U shaped magnets with one North pole side and one South pole side.
